Christopher Robin Fiore

Web Designer and Product Designer | New York, NY (open to remote)

chrisrobinfiore@gmail.com | christopherfiore.net | linkedin.com/in/christopherrobinfiore | github.com/globalanomalyindex

Web and product designer. I design landing pages, marketing sites and the component systems behind them, and I build them in HTML, CSS, TypeScript and React. I care most about typography, layout and motion. Portfolio reviewed by product designers at Goldman Sachs and The Walt Disney Company, and mentored by a senior digital designer at Marvel Studios. Hands-on with language models since GPT-2 in 2019.

Skills

Web design: Landing pages, marketing pages, product marketing sites, visual design, typography, layout and composition, responsive design, motion design, micro-interactions, accessibility (WCAG), SEO, web performance

Systems: Design systems, component libraries, page templates, templating systems, design tokens

Front end: HTML, CSS, JavaScript, TypeScript, React, Next.js, Vite, Tailwind CSS, Motion, Three.js, WebGL

Tools: Figma, Claude Code, Claude Design/Artifacts, Codex, Adobe Photoshop, Blender, Playwright, axe-core

Research: Experiment design, preregistration, blind evaluation, research synthesis, agentic AI workflows

Experience

Perfection Synthétique | Founder and Principal Designer | 2022 - Present

Design studio for web, product and interaction design, New York, NY

- Designed and built christopherfiore.net: typed content files feed shared page templates, prerendered to static HTML with per-page metadata, JSON-LD and a sitemap, deployed by GitHub Actions.
- Designed and shipped 11 project sites on GitHub Pages, from landing pages to live demos and case studies, built in HTML, CSS, TypeScript, React and Three.js.
- Built two motion-led component sets: JellyBox, a React and WebGL material system with keyboard and reduced-motion support, and a Disney/Pixar Monsters, Inc.-themed button set with motion matched to the films.
- Redesigned an e-commerce catalog page around the strain, not the SKU (MFNY, self-directed): 13 cards for 11 strains became 11, and premium forms stopped hiding behind cheaper ones. Delivered a prototype and specs.
- Led design on 14 projects from problem framing to working prototype.
- Designed and led a preregistered, blind, three-arm study of a new LLM ideation method (novelty +0.72, p=0.037). Published df2tm, an open-source Claude Code plugin built on 170 learning-science principles.

Freelance | Web and Product Designer | 2021 - Present

- Designed and built a professional website and matching resume for a senior designer at a major entertainment studio: content structure, visual direction, responsive build and final QA.
- Designed Shawn Klush's direct-to-consumer merchandise site (unreleased), taking fan club sales online.
- Designed an iOS food safety app and component system for a client living with celiac disease, from 46 exploratory wireframes to 30 final screens across 5 flows.

Shawn Klush | Fan Commerce and Operations Support | 2019 - Present

Internationally touring entertainer with a 92K+ following

- Contribute to official-channel posts and promotional announcements that reach a 92K+ audience.
- Handle fan club orders, worldwide shipping and customer email, and merchandise sales at live shows.

Education

Diploma in Concept Art, CG Spectrum College of Digital Art and Animation

BFA Studio Art coursework, Adelphi University, 2020 - 2021

Advanced Method courses, Lee Strasberg Theatre and Film Institute, 2021 - 2022

12 courses at Learn Squared with Jama Jurabaev, Greg Rutkowski and Maciej Kuciara

Certification: AI Fluency: Framework & Foundations, Anthropic, 2026
